

MUNICIPAL BOND PROGRAM

AS OF JUNE 30, 2022

AFTER FEES

Separate Accounts

INVESTMENT OBJECTIVES & STRATEGY

The Ocean Park Municipal Bond Program seeks to produce satisfying long-term returns while limiting downside risk. Returns are the result of or driven by interest income as well as increases in bond prices. The interest income from municipal bonds is tax-free at the federal (and sometimes state) level, providing a valuable benefit for clients in relatively high income tax brackets. The Program diversifies a client's account both directly and indirectly in at least four municipal bond mutual funds, which may include national and state-specific funds. Each holding is monitored daily and during declines, a proprietary stop-loss discipline is implemented with the goal of limiting drawdowns. The Program will be fully invested when there are many Buy signals and will, at times, be fully in cash when the universe of municipal bond mutual funds are showing Sell signals.

HOLDINGS

FUND	WEIGHT
Virtus Seix Investment Grade Tx-Ex Bd I	20.4%
Total	20.4%

ASSET ALLOCATION

Cash and Equivalents	79.6%
Tax Free Municipal Bonds	20.4%

Holdings and Asset Allocation are subject to change.

GROWTH OF \$100,000

Performance data quoted represents past performance and is not an indication of future results.

† The benchmark for the Ocean Park Municipal Bond Strategy is the Bloomberg Municipal Bond Index, which is an unmanaged index that is considered representative of the broad market for investment grade, tax-exempt bonds with a maturity of at least one year. One cannot invest directly in an index or category and unmanaged index or category returns do not reflect any fees, expenses, or sales charges.

DEFINITIONS

Standard Deviation is a statistical concept used in investment management to measure risk for the variability of return of a fund's performance. A high standard deviation represents greater risk.

Sharpe Ratio uses standard deviation to measure a fund's risk-adjusted returns. The higher a fund's Sharpe Ratio, the better a fund's returns have been relative to the risk it has taken on.

Downside Deviation is a risk statistic measuring volatility. It is a variation of Standard Deviation that focuses only upon the "bad" volatility.

Sortino Ratio is a modification of the Sharpe Ratio that differentiates harmful volatility from general volatility by taking into account the Standard Deviation of negative asset returns, called Downside Deviation.

Max Drawdown is an indicator of the risk of a portfolio chosen based on a certain strategy. It measures the largest single drop from peak to bottom in the value of a portfolio (before a new peak is achieved) using month-end data.

† The benchmark for the Ocean Park Municipal Bond Strategy is the Bloomberg Municipal Bond Index, which is an unmanaged index that is considered representative of the broad market for investment grade, tax-exempt bonds with a maturity of at least one year. One cannot invest directly in an index or category and unmanaged index or category returns do not reflect any fees, expenses, or sales charges.

The "Growth of \$100,000 - After Fees" graph and the "Quarterly Performance - After Fees" chart show the performance which was achieved in the Ocean Park (or affiliate) Municipal Bond Program marker accounts since the inception date of 7/1/2014. The performance presented is net of the annual fee rate of 2.400% from 7/1/2014 to 12/31/2018, 2.057% from 1/1/2019 to 12/31/2020, and 2.400% thereafter, which is calculated and deducted during the first month of each quarter. Fees are less for households with more than \$500,000 under management at Ocean Park. U.S. Dollars are the currency used to express performance results.

Since 1/1/2019, the marker accounts have been allocated to a mutual fund managed by an affiliate of Ocean Park. The fee reduction represents the Sierra mutual funds fee offset credit for that fraction of the account invested in one or more of the Sierra mutual funds.

Since 1/1/2016, the source of the performance data is from a marker account in the Ocean Park Municipal Bond Program. From 7/1/2014 to 12/31/2015, from a marker SMA account managed by an affiliate in the same way as the Ocean Park Municipal Bond Program.

For purposes of illustration, the hypothetical National Taxable Equivalent Return table assumes the highest federal income tax rate of 43.40% was in effect through 12/31/2017. Beginning 1/1/2018, the table assumes the highest federal tax rate of 40.80%. On that basis, the table shows the taxable return that an investor in the highest federal tax bracket would have needed in order to net the same return after federal tax. Contact your tax adviser to determine the specific impact of an investment in the Ocean Park Municipal Bond Program on your individual tax situation.

The net performance data shown reflects the reinvestment of dividends.

The performance data does represent the impact that material economic and market factors had on the investment manager's decision-making. The performance shown represents past performance. Past performance is not an indication of future results. All investments involve risk, including loss of principal.
